Summer 2026

Independent Study

- Lead Programmer role on a team to develop a three level game
- May - July 2026.
- Action rogue-lite fighting game with random generation, a destroyable environment, and a fish-hook grabbing system all with a pirate theme.

Development Pieces

Each work will be used as an educational experience for me to learn more about the following programming mechanics and systems.

Random Generation

Randomly generated levels full of enemies, loot, and environment objects.

Destroyable Environment

Environment objects of different material types with unique ways to destroy or manipulate them to the players advantage to use in battle or for pure chaos.

Enemy AI

Multiple enemy types with unique AI's. All working with a Nav-Mesh.

Grappling System

Player movement mechanic to move through the air at fast speeds. Grapple can destroy scene objects when used to move the player. Grapple can be used as a weapon aswell.

Objective

Develop a game highlighting my programming abilities for a portfolio piece over a three month period, while also learning how to create and implement four new programming techniques used in game development.

Motivation

- Fast paced working environment
- Collaboration with my team
- Thrill of achieving a solution to a problem
- Pride of learning a new skill
