Summer 2026

Independent Study

- Working as a performance engineer on a game with multiple complex levels.
- May-July 2026
- Action Rogue-lite game with cross-platform compatibility, multiple graphical options for increased accessibility, and controller compatibility.

Development Pieces

This project will bring about a better understanding on game optimization skills that will create smoother experiences for users and their systems.

Stress Testing

Pushing a project to its limits to identify shortcomings in particular areas and start developing solutions to the identified problems.

Controller Adaptation

Ensuring functionality with a variety of controllers for players to use.

Hardware Optimization

Modifying and adding options as needed to make the experience as widely available in as much hardware in the highest quality possible.

Debugging

Identifying and solving any potential issues in the game, creating a smoother and more functional experience.

Objective

Ensuring games run smoothly in as much hardware is important to creating as wide of an audience as possible. This endeavor would grant me skills in an area actively creating new players.

Motivation

- Professional development
- Learning new professional skills
- Polishing established skills
