PROJECT DESCRIPTION

Pirate Noir is an action rogue-like fighting game with random generation, a destroyable environment, and a fish-hook grappling system; all with a pirate theme.

PROJECT PURPOSE

Pirate Noir is a research project with the objectives to learn more complex code and programming techniques, creating a portfolio worthy piece, refining existing programming skills, and to develop a better understanding of optimization.

MILESTONES

1: JUNE 3 >

We will create the skeleton of the gameplay loop. Menus that open up to the game, a playable character, the ability to interact with the environment, a win and lose condition and screen. No assets will be apart of this goal.

> Lays / Leana Perez will be working on interactable environment and a win condition.

> Freddie Brailsford will be working on moveable character, and camera. Along with character health and stamina.

> Jordon Dubin will be working on working

menus.

> Juan Martinez will be working on game enemy that can trigger the lose condition.

2: JUNE 24 >

Random generation for enemies and loot implemented. Destroyable environment implemented. Limited assets.

> Lays / Leana Perez will be working on random generation of enemies and loot. Along with the logic for a destroyable environment, without the implementation done.

> Freddie Brailsford will be working on sound effect implementation. Environment building.

> Jordon Dubin will be working on environment building.

> Juan Martinez will be working on 2 new enemy variants.

3: JULY 15 >

Asset implementation progress. Environment and level building. Grapple mechanic working.

> Lays / Leana Perez will be working on implementing the destroyable environment and grapple mechanic functionality.

> Freddie Brailsford will be working on cutscenes.

> Jordon Dubin will be working on animation implementation.

> Juan Martinez will be working on grapple mechanic functionality.

FINAL: JULY 31

>

Controller compatibility. Final assets added in. Bug testing and fixes. Optimization work. Post to itch.io.

> Lays / Leana Perez will be working on final asset implementation and bug fixes.

> Freddie Brailsford will be working on QA testing and bug fixes.

> Jordon Dubin will be working on water implementation and optimization.

> Juan Martinez will be working on controller compatibility and performance.
